

SERVER CAGES

FOR PHYSICAL SECURITY

OPEN & SECURE

Our open but secure design allows free circulation of air, cooling systems, light, and fire suppression systems throughout the secured area. All cages are available in a variety of sizes with custom lock options available.

MODULAR SYSTEM

Server Cages are easy to reconfigure as needs change or when adding additional equipment. Cages allow for side-by-side storage of server racks, and are an inexpensive solution to network and physical security issues.

CLEAN INSTALLATION

No cutting or grinding is required during installation, so there is no worry about debris infiltrating the air or cooling systems in an operating facility. Strong, durable, and attractive server cages will impress potential clients.

SPECIAL MESHES AVAILABLE

With a name like WireCrafters, it goes without saying that we offer a variety of welded and woven wire mesh at the industry's most competitive prices.

Heavier gauge wire is available for increased security, as well as smaller mesh openings to prevent access on an ultra-secure level. We feature 2 inch square mesh down to the very secure 1/2 inch square mesh.

DATA CENTER SEGREGATION

Divide entire hosting facilities with our easily reconfigurable Server Cage System. Our cages can be used to economically separate and secure customer specific server or network equipment.

By keeping clients' equipment separated, you control access while benefitting from the shared conveniences of the facility – heating and cooling, fire suppression systems, etc. – while keeping all equipment visible and in plain sight.

STRONG & SECURE CAGES

The most important aspect of providing network and telecommunications to a large client base is keeping your customers' data safe, secure, and separated at all times.

We design our Server Cage system with all of the hardware on the inside of the enclosure. With hardware only accessible from the inside of the secured area, security is guaranteed.

OPTIONS

WireCrafters has a wide array of options for your Server Cage. Our standard hinged and sliding doors are available, as well as double-hinged doors, or custom doors. Ceilings are also available to further increase the security of your server cage system.

WireCrafters offers eight different powder coat colors in house, but can also match any color with a paint chip or RAL number.

48 HOUR SHIPPING

Stock panels and basic cages are kept in stock for quick 48 hour shipping from our Louisville, KY manufacturing facility or our warehouses in PA and NV.

Free layout assistance is available!

CUSTOM LOCKS

WireCrafters has experience with many different types and styles of locks for the physical security of servers and network equipment. Doors can be equipped with a basic key lock, or for more security, we also offer self-closing doors, keypad locks, card readers, finger print scanners, and even emergency exit push bars.
